

Reporting of Post-Marketing ADRs

January 20

POST-MARKETING REPORTING OF ADVERSE DRUG REACTIONS TO HUMAN MEDICINES IN SOUTH AFRICA

This serves as a guideline to those reporting adverse drug reactions. It represents the South African Health Products Regulatory Authority's current thinking on the safety, quality and efficacy of medicines. The Authority reserves the right to request any additional information to establish the safety, quality and efficacy of a medicine and may make amendments to the approved conditions of registration in keeping with the knowledge which is current at the time of consideration of safety data.

Guidelines and application forms are available from the office of the CEO and SAHPRA website.

Version 1 (2.11)	2003
Date for implementation	May 2003
Version1_1: Formatted, contact details updated	October 2010
Version 2	June 2011
Date for implementation (2.33)	December 2012
Version 3: Change in 5.1 (ii) data lock point, addition of template for summary report	August 2014
Version 4: Due date for comment	18 Dec 2015
Version 4: Change in title, published for implementation	September 2016
Version 4.1 Administrative corrections	November 2016
Version 5: Change in 4.1, 4.2, 4.6, 5.6 and addition of email address	June 2017
Version 6: Change in 1, 2.11, 3.2, 4.1, 4.2, 4.3, 4.4, 4.6, 4.16, 5.2 and 5.6	31 Jan 2020

DR B. SEMETE - MAKOKOTLELA
CHIEF EXECUTIVE OFFICER

1 INTRODUCTION

This guidance document covers the collection of Adverse Drug Reactions (ADRs) and product quality issues by SAHPRA for the following registered and marketed health products:

- pharmaceutical medicines (human medicines Category A and D)
- biological medicines (including vaccines)
- complementary medicines
- radiopharmaceuticals

This guideline does not apply to the reporting of ADRs and Serious Adverse Events (SAEs) related to unregistered medicines used in the context of pre-registration clinical trials and registered and marketed veterinary medicines.

This guideline is intended to assist holders of a certificate of registration (holder)/ applicants in the reporting of ADRs associated with the use of registered medicines and “Old Medicines” and in the management of safety data which may arise during post-registration and post-marketing clinical trials.

For the purpose of this guideline, “SAHPRA” refers to the South African Health Products Regulatory Authority, hereafter referred to as the Authority, and “NADEMC” refers to the National Adverse Drug Event Monitoring Centre. The terms “holder of certificate of registration” (holder) and “applicant” are used interchangeably. The terms “medicine” and “drug” are also used interchangeably.

1.1 Legal Basis

The guideline pertains to Regulation 40 issued in terms of the Medicines and Related Substances Act 101, (Act 101 of 1965) as amended.

1.2 Purpose of the guideline

Every applicant is required to report ADRs known to them involving their marketed medicines in accordance with the requirements of Act 101 of 1965 *Regulation 40*. The success of the Authority’s ADR reporting system depends on the quality, completeness, and accuracy of the information submitted. Reporting of ADRs and monitoring thereof, remain a viable means of identifying previously unrecognised, rare or serious ADRs. This may result in changing product safety information, facilitating decisions on regulatory actions such as withdrawal of a product from the South African market, contributing to international data regarding risks and effectiveness of medicines, and imparting health product safety knowledge that benefits all South Africans.

2 DEFINITIONS

2.1 Adverse Event

“Adverse event/experience” is any untoward medical occurrence in a patient or clinical trial subject administered a medicine that may present during treatment with that medicine but which does not necessarily have a causal relationship with this treatment.

An adverse event can be any unfavourable and unintended sign, symptom or disease temporally associated with the use of a medicine, whether considered related to the medicine, or not.

2.2 Adverse Drug Reaction (ADR) or Adverse Reaction

“Adverse drug reaction” or “adverse reaction” means a response to a medicine in humans which is noxious and unintended, including lack of efficacy, and which occurs at doses normally used in man and which can also result from overdose, misuse or abuse of a medicine

The definition of an adverse drug reaction or adverse reaction applies to registered medicines, medicines for which the applicant holds an application for registration (“Old Medicines”).

Response in this context means that a causal relationship between a medicine and an adverse event is at least a reasonable possibility.

An adverse reaction includes adverse clinical consequences associated with the use of a medicine outside the terms of the approved professional information/ applicable product information or other conditions laid down for the marketing and use of the product (including prescribed doses higher than those recommended, overdoses or abuse).

A reaction, contrary to an event (as in 2.1), is characterised by the occurrence of a suspected causal relationship between the drug and the reaction, as determined by the reporter or a reviewing healthcare professional. The fact that the healthcare provider / professional is making a report to a holder of a certificate of registration, serves as an indication that the observed event may be caused by the medicine. All spontaneous reports are, therefore, suspected adverse drug reactions.

In the case of pre- and post-marketing studies, adverse “events” are usually systematically solicited. In cases where there is uncertainty as to whether or not an event is a reaction, it is better to treat the event as a reaction. For the purpose of post-marketing clinical trials, an adverse drug reaction includes any adverse event where the contribution of the study medication, concomitant medication or other medicinal intervention of the clinical trial, cannot be ruled out.

2.3 Serious Adverse Drug Event or Adverse Drug Reaction

A serious adverse event/experience or reaction is any untoward medical occurrence that at any dose:

- results in death;
- is life-threatening;
- requires patient hospitalisation or prolongation of existing hospitalisation;
- results in a congenital anomaly/birth defect;
- results in persistent or significant disability/incapacity; or
- is a medically significant / important event or reaction.

The term “life-threatening” in the definition of “serious” refers to a reaction/event in which the patient was at risk of death at the time of the reaction/event; it does not refer to an event which, hypothetically, might have caused death if it were more severe.

Medical and scientific judgement should be exercised when deciding whether other situations are serious or not. Such instances could include medical events that may not be immediately life-threatening or result in death or hospitalisation, but which may jeopardise the patient or may require intervention to prevent one of the outcomes listed in the definition above. Examples include blood dyscrasias or convulsions not resulting in hospitalisation, or development of drug dependency or drug abuse.

The term “severe” is often used to describe the intensity (severity) of a specific event. This is not the same as “serious”, which is based on patient/event outcome or action criteria.

2.4 Unexpected (unlisted) Adverse Drug Reaction

For the purposes of this guideline, an “unexpected” adverse reaction is one in which the nature, specificity, severity and outcome is not consistent with the approved professional information for a registered medicine

An unexpected reaction includes class-related reactions which are mentioned in the applicable medicine information but which are not specifically described as occurring with a medicine. When the outcome of the adverse reaction is not consistent with the applicable medicine information the adverse reaction should be considered as unexpected.

An expected ADR with a fatal outcome should be considered unexpected unless the South African labelling specifically states that the ADR might be associated with a fatal outcome.

2.5 Significant safety issue

A significant safety issue is a new safety issue or validated signal considered by the applicant in relation to their medicines that requires urgent attention of the Authority. This may be because of the seriousness and potential major impact on the benefit-risk balance of the medicine and/or on patient or public health, which could warrant prompt regulatory action and / or communication to patients and healthcare professionals. The applicant can identify significant safety issues as a result of ongoing review and analysis of all information that is pertinent to the safety and benefit-risk balance of the medicine. A safety issue leading to international regulatory action is considered to be significant at all times and hence reportable.

2.6 Adverse Drug Reaction Report (Individual Case Safety Report)

An adverse drug reaction report is a detailed record of all relevant data associated with the use of a medicine in a subject or patient.

2.7 Spontaneous Report or Notification

A spontaneous report is a communication to a company, regulatory authority or other organisation that describes a suspected adverse drug reaction in a patient given one or more medicines, and which does not derive from a study.

2.8 Solicited Reports

Solicited reports are defined as those derived from organised data collection systems, which include clinical trials, registries, post-approval named patient programmes, other patient support and disease management programmes, surveys of patients or healthcare providers, or information gathering on efficacy or patient adherence.

For the purpose of safety reporting, solicited reports should be classified as Individual Case Safety Reports.

2.9 Reportable Adverse Reaction – Minimum Information

A reportable ADR requires the following minimum information:

- an identifiable source (reporter) of the information. This should include the name or initials and address of the reporter and the reporter’s qualification (e.g. doctor, dentist, pharmacist, nurse or lay person);
- an identifiable patient. A patient may be identified by surname and forename(s) or initials of surname and forenames, or by a reference number, or by age or gender;
- suspected medicine(s); and

- suspected reaction(s).

Information, additional to the minimum, should be actively sought and submitted as soon as it becomes available.

2.10 Periodic Safety Update Reports / Periodic Benefit-Risk Evaluation Reports

A periodic safety update report (PSUR) or a Periodic Benefit-Risk Evaluation Report (PBRER) is an update of the world-wide safety experience of a medicine at defined times post-registration, as determined from the international birth date.

Each safety update report should cover the period of time since the last update report. The PSUR or PBRER should be compiled in accordance with the requirements of the current ICH E2C Expert Group on Clinical Safety Data Management: Periodic Safety Update Reports for Marketed Drugs.

2.11 Line Listings

A line listing provides key information but not necessarily all the details customarily collected on individual cases. Reactions are classified by body system for the most serious-presenting sign or symptom according to Standard MedDRA Queries (SMQ). The headings usually included are:

- country of occurrence (if relevant);
- source (e.g. spontaneous, clinical trial, literature, regulatory authority);
- age;
- gender;
- dose(s) of suspected medicine(s)
- the diagnosis being treated by the suspect medicine;
- dosage form and/or route of administration, batch number when applicable;
- duration of treatment (prior to event) time to onset;
- description of reaction (as reported);
- patient outcome (e.g. fatal, resolved, etc.); and

In some instances, depending on the type or source, ADR reports should be presented as line listings. A line listing serves to help the Authority to identify cases that it might wish to examine more completely by requesting full case reports.

2.12 Risk-Benefit Balance Evaluation

An evaluation of the positive therapeutic effects of the medicine in relation to the risks (any risk relating to the quality, safety or efficacy of the medicine as regards patients' health or public health).

2.13 Healthcare Professional / Provider

For the purposes of reporting suspected adverse reactions, "healthcare professionals/ providers" are medical practitioners, pathologists, dentists, pharmacists, nurses, and other healthcare professionals including allied healthcare professionals and practitioners.

When reports originate from pharmacists or nurses, further information about the case should, where possible, be sought from a medical practitioner responsible for the patient. Furthermore, if there is more than one reporter, the healthcare professional directly involved with the patient's care and who provides the most complete and clinically relevant information, will be considered the primary reporter.

2.14 Abuse of Medicine

“Abuse of Medicine” refers to the persistent or sporadic, intentional excessive use of medicines which is accompanied by harmful physical or psychological effects.

2.15 Consumer

A consumer is defined as a person who is not a healthcare professional / provider, such as a patient, lawyer, friend, relative or carer of a patient.

3 PHARMACOVIGILANCE OBLIGATIONS OF THE HOLDER OF A CERTIFICATE OF REGISTRATION/ APPLICANT

3.1 The Role and Responsibilities of the Holder of a Certificate of Registration/ Applicant

- (i) The holder or applicant should ensure that it has in place an appropriate system for pharmacovigilance that will provide for the proper management of safety data for its medicines and to ensure that appropriate action can be taken when necessary. It is a requirement that the applicant has available, in South Africa, a full-time qualified person responsible for pharmacovigilance and post-marketing surveillance i.e. pharmacovigilance officer. This person should have experience and training in all aspects of pharmacovigilance and, if not a healthcare professional/ provider, should have access to a medically qualified person.
- (ii) The Responsible Pharmacist must nominate a specific individual, i.e. pharmacovigilance officer responsible for pharmacovigilance activities. The Authority must be informed in writing the name of the person who will assume responsibility for all matters pertaining to pharmacovigilance, including the person's contact details (postal and e-mail addresses and telephone and fax numbers).
- (iii) The holder or applicant should ensure that there is full documentation covering all procedures and activities of the pharmacovigilance officer and that mechanisms are in place to ensure that the pharmacovigilance officer may receive or seek all relevant information.

3.2 The Role and Responsibilities of the Holder of a Certificate of Registration's/ Applicant's Pharmacovigilance Officer

Responsibilities of the holder's or applicant's pharmacovigilance officer should include:

- (i) the establishment and maintenance of a system which ensures that information about all suspected adverse reactions, which are reported to the holder or applicant, including to medical representatives and clinical research associates, is collected and collated so that it is accessible at a single point;
- (ii) serving as a contact person for the Authority and NADEMC for all matters relating to pharmacovigilance;
- (iii) the preparation of the following, either directly or by delegation/supervision, for submission to the Authority:
 - ADR reports;
 - summary report for both serious and non-serious ADRs occurring in South Africa;
 - Periodic Safety Update Reports (PSURs) or Periodic Benefit-Risk Evaluation Reports (PBRER), when necessary;
 - company-sponsored post-registration study reports, when required; and
 - ongoing pharmacovigilance evaluation during the post-registration period; and

- (iv) ensuring that any request from the Authority for additional information deemed necessary for the evaluation of the risk-benefit ratio of a medicine, is provided to the Authority promptly and in accordance with all requirements,
- (v) ensure that all the above responsibilities are met for all old and registered medicines on the Authority's Register that are marketed in South Africa. For products that are no longer marketed, post marketing surveillance and reporting of ADRs should continue until six months after the expiry date of the last marketed batch.

3.3 Contractual Arrangements

A holder or applicant may contract any or all of the pharmacovigilance tasks and functions, including the role of pharmacovigilance officer, to another person or organisation based anywhere in the world, but the ultimate responsibility for the fulfilment of all pharmacovigilance obligations and the quality and integrity of this always resides with the holder or applicant.

4 ADVERSE DRUG REACTION REPORTS

In order to report ADRs in accordance with the regulations, it is sufficient that each applicant report to the Authority the following domestic (South African) cases as stipulated below:

4.1 Time frames for ADRs occurring in South Africa

- (i) All serious, suspected ADRs, whether expected or unexpected, occurring in South Africa with any old or registered medicine, must be reported by the holder or applicant within fifteen (15) working days of receipt of such information.
- (ii) All non-serious, expected and unexpected, suspected adverse drug reactions, occurring in South Africa with any old or registered medicine, should not be routinely reported to the Authority. However, they must be presented as a line listing/summary tabulation (cumulative table) in a summary report and submitted when requested as stipulated under 5.6.
- (iii) The reporting time clock for submission of serious ADRs starts on the day that the four minimum data elements (see 2.9) (Day 0) in relation to the ADR report are received by any of the holder/applicant's personnel, including sales representatives and contractors. Where the applicant has entered into a relationship with another company for the marketing of, or research on the suspected medicines, Day 0 is as soon as any personnel of the holder or applicant receives the four minimum data elements. The timeframe for regulatory submission should be no longer than fifteen (15) working days from the first receipt of the four minimum data elements by the Holder/Applicant.
- (iv) The reporting time clock for follow-up information restarts when the Holder/Applicant receive additional clinical or medically relevant information for a previously reported serious ADR. This information must be reported as soon as possible and no later than fifteen (15) working days after the Holder/Applicant receive the additional information.

4.2 Time frames for reactions occurring outside South Africa

- (i) Foreign individual case reports should not be forwarded to the Authority on a routine basis, but should be reported in the context of a significant safety issue or in response to a specific request by the Authority.
- (ii) The holder or applicant should advise the Authority of any regulatory decision/action relating to safety that has been taken by any medicines regulatory agency/authority in another country, including the basis for such action, within three (3) working days of first knowledge of such action.

4.3 Periodic Safety Update Reports/ Periodic Benefit-Risk Evaluation Reports

- (i) PSURs/PBRERs should **only** be submitted in the following situations:
 - Whenever requested by the Authority.
 - When the submission of PSURs/PBRERs is a condition of registration for a new medicine or range of medicines. The holder/applicant must submit these PSURs/PBRERs within 30 working days of initial receipt from the parent company.
 - As part of a submission to amend the conditions of registration when the PSUR/PBRER contains information supporting the amendment.
 - The PSUR or PBRER should be compiled in accordance with the requirements of the current ICH E2C Expert Group on Clinical Safety Data Management: Periodic Safety Update Reports for Marketed Drugs.
 - In addition to the PSUR, the applicant should prepare & submit a national appendix relevant to South Africa. This national appendix should include the following:
 - Patient exposure in SA
 - ADRs reported in SA (in a line listing format)
 - Approved local professional information
- (ii) The holder or applicant should inform the Authority of any steps, which are taken, or to be taken, with regard to safety concerns raised in the PSUR/PBRER at the time of the submission.

4.4 South African Case Reports from Published Scientific Literature:

- (i) Holders or applicants should, through screening of the worldwide literature (via search tools e.g. PubMed), report published accounts of serious suspected ADRs related to the active substance(s) of their medicines occurring in South Africa. A copy of the relevant scientific publication should always be provided.
- (ii) An ADR report should be completed for each identifiable patient (with an identifiable ADR). For instance, if an article describes six identifiable patients with a given adverse experience, six ADR reports should be submitted to the Authority.
- (iii) If more than one medicine is mentioned in the literature report, only the holder or applicant whose medicine is suspected of being the cause is required to submit a report. The suspect medicine is usually the one stated as such in the body or title of the article by the author(s). All concomitant medicines reported in the article should be included in the report, whether belonging to the applicant of the suspect drug or not.
- (iv) If the source of the medicine and/or the proprietary name is not specified and ownership of the product cannot be excluded on the basis of the active substance(s), dosage form or route of administration and marketing status of the product (refer to 3.2.v), the holder or applicant should assume that it is one of their medicines the publication refers to, although the report should indicate that the specific medicine source and/or the proprietary name was not identified.
- (v) If the literature report is of a generalised nature with no identifiable patient, it should not be submitted as an individual case report. However, if the report identifies a safety concern this should be communicated to the Pretoria office and include an opinion on the issue prepared on behalf of the holder or applicant.

4.5 Reports from Post-Registration Studies

- (i) All suspected serious adverse drug reactions from post-registration studies taking place in South Africa must be reported according to 4.1 above. This applies to reports from any type of clinical or epidemiological investigation, regardless of design or purpose, involving a medicine.

- (ii) Investigators involved in post-registration studies should be aware of the definition of what constitutes a serious adverse drug reaction, as well as the distinction between 'reactions' and 'events'.
- (iii) In the case of post-registration studies, adverse "events" are usually systematically solicited. In cases where there is uncertainty as to whether or not an event is a reaction, the case should be reported as an adverse reaction. Events that are clearly unrelated to the medicine should not be reported.
- (iv) If the manufacturer receives a report of a serious adverse drug reaction from the investigator who is blinded to individual patient treatment, the guidelines outlined in section (v) below should be adhered to.
- (v) **Managing blinded therapy cases:** When a serious, unexpected, suspected adverse reaction occurs which results in death or, which is life-threatening, and is, therefore, judged reportable on an expedited (rapid) basis, it is recommended that the blind be broken only for that specific patient by the sponsor, even if the investigator has not broken the blind. It is also recommended that, when possible and appropriate, the blind be maintained for those persons responsible for analysis and interpretation of results at the study's conclusion. By retaining the blind, placebo and comparator (usually a marketed medicine) cases are filed in the database unnecessarily.
- (vi) When a fatal or other serious outcome is the primary efficacy endpoint in a clinical trial, the integrity of the clinical trial may be compromised if the blind is broken. Under these and similar circumstances, agreement should be reached in advance with the Authority concerning serious events that would be treated as disease-related and not subject to expedited reporting. An independent data safety monitoring board should be established prior to commencement of the trial, and its composition and terms of reference, should be submitted with the clinical trial application documents to the Authority for evaluation.

4.6 On-Going Pharmacovigilance Evaluation

It should be noted that the requirements for on-going Pharmacovigilance Evaluation as described in this section takes precedence over other cumulative ADR reporting requirements mentioned in this guideline, such as the Summary Report (i.e. the submission of the Summary Report upon request by the Authority does not replace the requirements for reporting stipulated in this section).

- (i) Holders or applicants must inform the Authority, within three (3) working days of first knowledge, whenever new evidence becomes available (nationally and internationally) that could significantly impact on the benefit/risk assessment of a medicine or which would be sufficient to consider changes to the conditions of registration of the medicine.
- (ii) Holders or applicants must report any change in the nature, severity or frequency of expected ADRs or any new risk factors identified within fifteen (15) working days. The basis on which these assessments are made should be included.
- (iii) Additional pharmacovigilance data, such as actual case reports, drug usage figures, the regulatory status of the medicine in other countries, independent pharmaco-epidemiology studies, pre-clinical studies or significant product quality data may be requested by the Authority as the situation warrants. This will be requested for submission within a time period specified by the Authority.

4.7 Consumer Reports

If a holder or applicant receives an adverse drug reaction report from a consumer, the holder or applicant should advise the consumer to report this reaction through his/her healthcare provider / professional.

If this approach fails, the holder or applicant should attempt to obtain as much information as possible from the consumer, including medical documentation. If the minimum four data elements for reporting (see 2.9) have been met, and the report is deemed to be relevant by a healthcare provider / professional within the company, the case is considered reportable, in line with 4.1 (i) and (ii).

4.8 Reports relating to pregnancy and breastfeeding

The holder or applicant must report suspected adverse drug reactions related to pregnancy or breastfeeding as specified in 4.1 and 4.2 above, regardless of whether the drug is contra-indicated in pregnancy and/or lactation. Reports on pregnancy should not be forwarded before the outcome is known, unless unintended pregnancy is suspected as an adverse drug reaction. Reports on pregnancy should not be submitted if there is no adverse effect to the foetus/infant. Reports of termination of pregnancy without information on congenital malformation should not routinely be reported.

4.9 Teratogenicity and Congenital Anomalies

For reports on congenital anomalies or teratogenicity, the following information should be provided:

- Age and sex of the infant
- the birth date or the date on which pregnancy was terminated
- date and/or duration of *in utero* exposure where possible
- any adverse reaction experienced by the mother must be considered a new initial case report on a separate report form.

4.10 Reports of lack of efficacy

“Lack of efficacy” is defined as failure to produce the expected pharmacological action. Lack of efficacy applies to registered medicines, including when used for an unapproved indication. Reports of lack of efficacy should not be routinely reported as serious adverse drug reaction reports.

Lack of efficacy with medicines used for the treatment of life-threatening diseases (e.g. antimicrobial agents), vaccines or contraceptives or other classes of medicines where lack of efficacy could result in serious consequences, require reporting. Normal progression of disease does not imply lack of efficacy. The holder or applicant should use clinical judgement to consider whether a case qualifies as serious for reporting purposes. The lot number of the suspected medicine for a report of lack of efficacy must be included in the report.

4.11 Overdose

Reports of overdose should be submitted only when the overdose was associated with an adverse reaction. Suspected serious adverse reactions, associated with an overdose, should be reported. This should include reports which indicate that taking of the suspect medicine led to suicidal intention and subsequent overdose of the suspect medicine, or of other medication(s). Reports of overdose that are associated with serious adverse reactions must be reported according to 4.1(i).

4.12 Medication Errors

Medication errors that are associated with serious adverse reactions must be reported according to 4.1(i). Information on medication errors, whether resulting in an adverse reaction or not, should be included in the Summary Report.

4.13 Medicine Defects

If an adverse event is suspected to be related to a medicine defect, it should be reported in the same manner as a suspected adverse reaction. The lot number of the suspected medicines must be included in the report. Holders or applicants should inform the Authority whether the implicated products have been tested for quality attributes and what, if any, corrective actions are being or have been taken.

4.14 Interactions

If an adverse event is suspected to be related to an interaction between two or more medicines, it should be reported as an adverse reaction in the prescribed manner.

4.15 Adverse Reaction Reports from the Internet

Holders or applicants should regularly screen websites and social media accounts under their management or responsibility for potential ADR case reports. The frequency of the screening should allow for potential valid ADRs to be reported to the Authority within the appropriate timeframe, based on the date the information was posted. Unsolicited cases from the Internet should be handled as spontaneous reports. For determination of reportability, the same criteria should be applied as for cases provided via other means. In relation to such cases from the Internet, identifiability of the reporter refers to the existence of a natural person, i.e. it should be possible to verify that the patient and reporter exist (e.g. a valid e-mail address has been provided). Contact details should only be used for pharmacovigilance purposes.

4.16 Period after Suspension, Cancellation or Withdrawal of Holder of Certificate of Registration/ Applicant

The holder or applicant should continue to collect ADR reports related to the concerned medicine and continue to report if information becomes available, even after suspension, cancellation or withdrawal of registration or "Old Medicine" status until six months after the last marketed batch expiry. After this date, the applicant should report any new follow-up information on the reported cases and continue to collect (but not report) safety information the applicant is made aware of for review of delayed onset adverse reactions or retrospectively notified cases.

5 PROCEDURES FOR REPORTING

5.1 To Whom to Report

All reports required by these guidelines should be sent to the Authority's Pretoria office.

5.2 Route of Notification

Reports should be sent to the Authority by either post, facsimile, or email in the format stipulated in 5.3.

Reportable Safety Information as reflected in the Guidelines associated with **registered human medicines** must be sent to:

SAHPRA Head Office
Building A, Loftus Park,
2nd Floor,
402 Kirkness Road,
Arcadia, 0083

Tel: 012 842 7609/10
Email: adr@sahpra.org.za (for manual reports)
e2b@sahpra.org.za (for reports in e2b format only)
pvqueries@sahpra.org.za (for all PV related issues excluding ADR reports)

OR

National Adverse Drug Event Monitoring Centre
South African Health Products Regulatory Authority
C/o Division of Pharmacology
University of Cape Town
Observatory

Tel: 021 4471618
Fax: 021 448 6181

5.3 Report Format and Details

- (i) Reporting can be done using the adverse reaction report form available from the office of the CEO, Pretoria or NADEMC offices, the Authority's website or the holders or applicants may use their in-house reporting forms (including the Council for International Organisations of Medical Sciences (CIOMS) I format) provided all the minimum data elements (see 2.9) are included on the form in a readable format, which include an identifiable reporter, an identifiable patient, a suspect product and an adverse reaction.
- (ii) Reports can also be submitted to the Authority in the E2B format using the xml file.
- (iii) Holders or applicants should submit **ALL** the **relevant** information available at the time of initial notification of an adverse drug reaction report, not only the minimum information required for a report. The attachment of discharge summaries, post-mortem reports, relevant laboratory data and other additional clinical data, is encouraged.
- (iv) The original words/description (verbatim) used by the initial reporter to describe the adverse reaction should be provided. The medicine name as reported by the initial reporter must be provided, preferably the proprietary name.
- (v) Additional information, not available at the time of the initial report, should be provided in the form of follow-up reports.
- (vi) The holder or applicant is required to submit the name or initials, address and telephone number and qualification of the initial reporter on the adverse drug reaction report form. In order to ensure confidentiality, the initials of the reporter may be used. The full reporter information should be disclosed to the Authority upon request.

5.4 Follow-Up Reports

Any follow-up information from the holder or applicant relating to an initial ADR report submitted to the NADEMC, must be cross-referenced to the unique number assigned by the holder or applicant. A CIOMS format "initial" report which follows a previous (first) communication from the applicant must be clearly marked that it is a follow up and linked through the applicant-assigned reference number. **This is the**

only reliable way to minimise the duplication of reports, submitted by holders or applicants, in the Authority's database.

5.5 Another Holder of a Certificate of Registration / Applicant's Medicine

Spontaneous reports: If a holder or applicant receives a report of a suspected adverse reaction to a medicine marketed by another holder or applicant, the report should promptly be forwarded to the holder or applicant of that medicine. The holder or applicant to whom the event was originally reported should not forward such reports to the Authority to avoid duplication of reporting. A holder or applicant who receives such a report about its medicine from another holder or applicant is required to submit the report to the Authority within the same timeframe applicable to other reports. Details relating to the patient and the initial reporter are required as for any other report. In order to ensure confidentiality, initials of the patient and/or reporter may be used.

5.6 Summary Report (SR) for each registered medicine

The applicant must on an annual basis and whenever requested by the Authority, conduct a concise analysis of the non-serious and serious ADRs to each registered active ingredient and prepare a summary report in respect of the reports received during the previous twelve months. The summary report is to be maintained by the applicant and be easily accessible when requested. The summary report should only be submitted to the Authority upon request, within 30 working days.

After preparing the annual summary report, the applicant must determine whether there has been a significant change in what is known about the risks and benefits of the drug. If the applicant concludes from the annual summary report that there has been a significant change, the applicant must inform the Authority in writing without delay as per the reporting requirements. Examples may include a significant change in the frequency or severity of a known risk or the identification of a previously unknown risk.

Time frame for submission of SR: Each holder or applicant must specify the 12-month period which it will use for the SR. The 12-month period and the data lock-point selected by the holder or applicant should be communicated to the Authority. The holder or applicant may change the reporting period and should communicate the new 12-month period and the data lock-point selected, as well as the justification for the change to the Authority.

ADR reports to be included: All South African spontaneous reports (serious and non-serious) received by the holder or applicant during the specified 12-month period, all published reports of suspected ADRs, all lack of efficacy reports, and all reports from post-marketing studies (published and unpublished).

The information included in the annual summary report will contain the following:

- Introduction
- Changes to the applicant's product safety information
- Significant regulatory actions bearing on safety (domestic and foreign)
- Line listing and summary tabulations
- Critical analysis:
 - A change in characteristics of expected reactions e.g. severity, outcome, target population
 - Serious unexpected reactions, placing into perspective the cumulative reports since marketing
 - Non-serious unexpected reactions

An increased reporting frequency of expected reactions, including comments on whether it is believed the data reflect a meaningful change in AR occurrence

- Comparative analysis of reporting rates using patient exposure estimate (analyses may be done in the context of amount of sales of the drug or by estimating the number of patient days of exposure)
- The report should also explicitly address any new safety issue on the following (lack of significant new information should be mentioned for each):
 - drug interactions
 - experience with overdose, deliberate or accidental, and its treatment
 - drug abuse or misuse
 - positive or negative experiences during pregnancy or lactation
 - experience in special patient groups (e.g. children, elderly, organ impaired)
 - effects of long-term treatment

5.7 Confidentiality

Strict confidentiality will be maintained by the Authority regarding the identities of the patient and the reporter.

7 APPENDICES

APPENDIX 1: TABULATED SUMMARY OF REPORTING REQUIREMENTS

Post-Registration ADR Reports (registered medicines)

Type of ADR report	Time frame for reporting	Format
South African Reports (spontaneous/published/study): <ul style="list-style-type: none"> • Serious (expected and unexpected) • Non-serious (expected and unexpected) 	≤15 working days Upon request within 30 working days	ADR form # SR
Foreign Reports (spontaneous/published/ study): <ul style="list-style-type: none"> • Serious 	On request or relating to a significant safety issue	As appropriate
Notification of Change in Nature, Severity or Frequency or Risk factors	≤3 working days	Detailed report(including publications)
Significant safety issues - New safety information impacting on benefit-risk profile of a medicine including decisions by national medicines regulatory authorities other than the Authority	≤3 working days	Detailed report (including publications)

The holder/applicant's in-house ADR report form or NADEMC ADR report form.

APPENDIX 2: TEMPLATE FOR SUMMARY REPORT

1. Review period

Specify the dates for the 12-month period applicable to the data presented. If periods differ for different medicines, this needs to be specified. It should be kept in mind that the data must be presented annually.

2. South African usage of each formulation for the review period

This may be sales data or patient exposure.

3. Critical (concise) analysis of all the reported ADRs for each medicine

3.1 New ADRs identified

Indicate whether any new ADRs have been identified and whether such are serious or non-serious.

3.2 New risk factors identified

3.3 Changes in reporting rate

Any changes in reporting rate(s) of ADRs reported in a comparable period, using estimated South African exposure of the medicine, and with reference to international and cumulative data.

3.4 Other new safety issues

This includes any new safety issue related to drug interactions, overdose, drug abuse or misuse, use in pregnancy, use in special patient groups or effects of long-term treatment, if not included in any of the above points.

3.5 Actions taken or to be taken

This includes actions taken or to be taken by any other regulatory authority or marketing authorisation holder (includes the local holder of a certificate of registration / applicant).

4. Conclusion

A simple risk-benefit statement for ongoing use and monitoring of the medicine is required.

5. Line-listing

The line listing should include the source, patient gender and age, formulation (including strength), daily dose, treatment dates and duration or time to onset, adverse reaction(s), seriousness, outcome and comment (including medical history and concomitant medicines). Reports received from a consumer should be clearly identified.

Depending on the medicine or circumstances, it may be useful or practical to have more than one line-listing, such as dosage forms or indications, if such differentiation facilitates presentation and interpretation of data. It may also be useful to have separate tabulations for serious reactions and for non-serious reactions, for expected and unexpected reactions, or any other breakdown as may be useful for interpretation of the data. When the number of cases is very small, or the information is inadequate for any of the tabulations, a narrative description rather than a formal table would be considered suitable.

The line-listing should include all South African spontaneous reports (serious and non-serious) received by the holder or applicant during the specified 12-month period, all published reports of suspected ADRs, all lack of efficacy reports, and all reports from post-marketing studies (published and unpublished).
